1) After restarting your computer: what to run and where to start

Open PowerShell and run:

```
Set-ExecutionPolicy -Scope Process -ExecutionPolicy RemoteSigned
& "c:\Users\Pranamya Tripathi\venv\Scripts\Activate.ps1"
cd "c:\Users\Pranamya Tripathi\Downloads\voice_erp_assistant\voice_erp_assistant"
uvicorn app.main:app --host 127.0.0.1 --port 8000 --reload
```

Then open this in browser:

http://127.0.0.1:8000/

If the virtual environment is not there, recreate it:

```
cd "c:\Users\Pranamya Tripathi\Downloads\voice_erp_assistant\voice_erp_assistant"
python -m venv .venv
. .\.venv\Scripts\Activate.ps1
pip install -r requirements.txt
pip install vosk
```

Then run:

```
uvicorn app.main:app --host 127.0.0.1 --port 8000 --reload
```

2) Commands, gestures, greetings and expected assistant output

Greetings

The assistant understands:

- hi
- hello
- hey
- good morning
- good evening
- good afternoon
- how are you
- what can you do
- who are you
- thank you
- goodbye

Example outputs:

- “Hello! I’m your ERP assistant. I can help with stock, attendance, and sales. What would you like to check?”
- “I’m doing well and ready to help with your ERP tasks.”
- “I can check inventory, summarize attendance, review sales, and help with standard ERP operations.”
- “You’re welcome. I’m happy to help.”

ERP commands

Examples the assistant understands:

- check stock for P-102
- show inventory
- mark my attendance
- what is my attendance
- summarize sales
- view sales
- check stock for item
- show sales for last month

Examples of replies:

- “I can summarize your attendance. Try asking: ‘show my attendance’…”

- “I can check inventory…”
- actual ERP result like stock count, sales total, attendance state
- confirmation prompt before writing/updating data

Voice / mic gestures

The UI includes:

- Speak button
- Send command button
- microphone recording flow
- browser fallback to normal recorder if browser speech is unavailable

Expected behavior:

- click Speak → microphone starts listening
- click Stop → audio is sent to backend
- backend transcribes it, interprets it, and returns a reply

Final simple user flow

1. Start the app
2. open localhost:8000
3. type or speak:
    a. hello
    b. check stock for P-102
    c. mark my attendance
    d. show sales
4. assistant will reply with:
    a. greeting
    b. ERP result
    c. confirmation prompt before writes
    d. final answer in natural language

Short version

Start:

```
Set-ExecutionPolicy -Scope Process -ExecutionPolicy RemoteSigned
& "c:\Users\Pranamya Tripathi\venv\Scripts\Activate.ps1"
cd "c:\Users\Pranamya Tripathi\Downloads\voice_erp_assistant\voice_erp_assistant"
uvicorn app.main:app --host 127.0.0.1 --port 8000 --reload
```

Open:

http://127.0.0.1:8000/

Then say:

- hi
- check stock for P-102
- show my attendance
- summarize sales

And it will answer in natural, conversational ERP style.
